5 Signs Your Organization Has a Clarity Problem

A professional one-page diagnostic by **Zeeshan Sabri**, ClarityOS. Rate each sign honestly to identify where decision latency, role ambiguity, or authority confusion is blocking your organization.

CLARITY RISK

HIGH

3+ signs present warrants immediate attention

DECISION LATENCY

48-hour gap is the threshold

AUTHORITY CLARITY

Governance solidifies under pressure

THE 5 SIGNS DIAGNOSTIC

01	Decision Latency	How long between decision and action? A gap exceeding 48 hours for items under \$100K signals clarity is not installed. Speed reveals system design.
02	Role Ambiguity	Ask three people "Who owns X?" Three different answers = not an execution problem, but a clarity problem. Ownership must be singular and unambiguous.
03	Signal Overload	More than three priorities per person means nothing is a priority. Signal overload is the first symptom of a missing decision architecture.
04	Recurring Firefighting	The same crisis every quarter — same fire, same heroes — is not bad luck. It is a structural gap masked as urgency. Patterns repeat until the system changes.
05	Authority Confusion	When pressure hits, who decides? If the answer changes depending on who is in the room, governance is not real. Authority confusion is the #1 cause of transformation stalling.

Your next step

If two or more signs resonated, you do not have a strategy gap. You have a **clarity gap**
